

ACTIVITY-3 :-Progress check-in presentation & submission (MVP-1)

1. Re-introduction & Project blurb :-

This project will connect the NGOs to the general populace. This project will allow NGOs to post their campaign details so that people who need help can find out appropriate NGO campaign and ask for help. Additionally people who want to do volunteering can join campaign which will be helpful for the NGOs. To conclude, this project is to serve humanity to the society

UNSD Goals :-

1)No Poverty 2)Zero Hunger 3)Good Health & well-being 4)Quality education

2. Scrum Date:

Start Date: 26th May 2021 End Date:02nd June 2021

3. Status Description:

I have done my all back-end Functionalities of the project .

>Registration and Authentication of NGO and Admin.

>NGO can see their own profile and edit data.

>NGO can login in it's own portal and can add, view ,edit ,delete it's own activity.

>User can see the post of NGO and Registered NGO Data

All the Data in project are dynamic and store in the database.

4. Project Issues:

During Journey there were many errors pop up but with the help of internet I have solved it. So, currently no major issues left.

5. Project Change:

Until now ,there is no need for the changes in project plan.

6. Next Up:

Well, My all the backend and database functionalities are completed so now I'm planning to make better User Interface which will attract Users.

7. Reflection:

- Do you feel 'On track'?

Yes I believe I have completed heart of the web portal(Back-end Development).

- What progress do you particularly Feel good about?

Well, I have never completed whole back-end development in just a week so my confidence level rise up and I feel whole progress.

- What questions or concerns do you have?

Professor told me to think about anonymous users who have enough money can also ask for the help to the NGO. So, I have think options to solve.

1) Every user have to register for the login before accessing web portal.

>Con: This will decrease the audience volume as most of the people don't like to login. It will be easy to access website without login detail and attract more user.

2) In every activity post there will be one link "Need help?" and it will guide user to enter his personal details which will prove user is really poor like national income certi , account detail etc. This data will store in database and provide specific NGO. So that NGO can verify user.

>Con: As a code of ethics I think we can not provide our user's personal data to the NGO.

3) When NGO will post activity at that time NGO can share the required document list for the poor people who are seeking help. NGO will verify documents on the campaign location.

>Pros:- No data integrity , No need of verification online,
